Sai Hitesh Bommagani

Tucson, AZ | 240-708-1900 | bommagani@arizona.edu | linkedin.com/in/sai-hitesh-bommagani14 | github.com/saihitesh-14

Education

University of Arizona, Tucson, AZ **Expected May 2027**
B.S. Computer Science and B.S. Artificial Intelligence | Minor: Entrepreneurship and Technology Innovation
Relevant Coursework: Machine Learning, Natural Language Processing, Algorithms, Probability and Statistics

Technical Skills

Languages: Python, Java, JavaScript, TypeScript, SQL, C/C++ (coursework)
AI and ML: LLM Applications, RAG Pipelines, Agent Design, Prompt Engineering, LLM as Judge Evaluation, Claude API, Google Gemini API, Voyage Embeddings, Scikit-learn, Logistic Regression, ROC-AUC, Pandas, NumPy
Backend and Web: FastAPI, SQLModel, PostgreSQL, pgvector, Supabase, REST APIs, AWS Lambda, API Gateway, AWS CDK, React, Tailwind, Jinja2, Render
Tools and Workflow: Git, GitHub, CI/CD Workflows, pytest, Playwright, Agile/Scrum, Linux/Bash, PyMuPDF, Matplotlib, Google Analytics, Notion, Slack

Experience

Brain Bridge Labs, Tucson, AZ **May 2026 to Aug 2026**
Forward Deployed AI Engineer Intern

- Converted anonymous website traffic into attributed CRM records, modeled to add roughly $2K per year in new sales pipeline for a site with 600 monthly visitors and zero prior lead capture, by shipping a serverless Python pipeline on AWS Lambda, API Gateway, and AWS CDK infrastructure as code.
- Restored accurate marketing attribution across 35+ campaigns, hardened by 27 pytest unit tests and 10 Playwright end to end tests, by diagnosing a silent failure that misfiled every lead under a fallback source.
- Owned the full forward deployed loop from ROI based project selection through delivery, measured by an embedded AI chatbot routing conversational leads into the CRM identically to form submissions.

McGraw Hill (Eller Immersion Learning), Tucson, AZ **May 2026 to Aug 2026**
AI/ML Engineer, Contract

- Cut instructor lecture prep from hours to minutes, measured by one learning objective expanding into a complete citable lesson kit of outline, teaching script, slides, and assessments, by building a textbook grounded RAG engine in Python, FastAPI, PostgreSQL pgvector, Claude API, and Voyage embeddings.
- Blocked out of scope hallucinations in a production ready POC handed off to the client, measured by progressive QA gates and an LLM as judge evaluation layer with bounded auto refinement, by designing the retrieval grounding, prompt chain, and React/TypeScript delivery layer.

Vantage West Credit Union (Eller Immersion Learning), Tucson, AZ **May 2026 to Aug 2026**
Full-Stack Developer, Contract

- Launched CUCAN, a confidential mutual aid platform letting credit unions request and offer peer support anonymously, measured by identities revealed only after two party consent, by building PII detection, per user non solicitation pledge gating, and a plain language audit log.
- Verified member institutions against the NCUA roster of 4,200+ federally insured credit unions with geography scoped request visibility, measured by 175+ automated tests, by implementing a FastAPI, SQLModel, PostgreSQL, Jinja2, and Tailwind stack deployed on Render.

MyPeps, Tucson, AZ **Feb 2026 to May 2026**
AI Engineer

- Automated structured extraction from PDF and image based lab reports, measured by an ingestion pipeline generating patient wellness insights and provider follow up notes, by building a Python integration layer on the Anthropic Claude API with PyMuPDF and RAG style prompt construction.
- Raised backend reliability for clinical data handling, measured by a reference range validator, diagnostic guardrails, audit logging, and session validation middleware, by designing reusable components at each layer of the stack.

Hack Arizona, Office of Undergraduate Education, UA, Tucson, AZ **Aug 2025 to Present**
Lead Organizer

- Scaled Arizona's largest student run hackathon to 400+ participants and secured $5K in 2026 sponsorship, measured by reduced sponsor confirmation time and an expanded sponsor pool, by leading a 15+ person cross functional team and restructuring outreach with data driven analysis.

Projects

Bridge-to-Care | *React, TypeScript, Supabase, Google Gemini API, Tailwind* **Apr 2026**

- Automated clinician triage of patient daily check in data, measured by a four tier risk scoring pipeline with custom safety logic and generated clinician PDF reports, by architecting and shipping a production ready modular backend and developer facing platform from the ground up.

Cardiovascular Risk Prediction | *Python, Scikit-learn, Logistic Regression, ROC-AUC* **Jan 2026**

- Improved model sensitivity from under 30% to over 60%, measured by confusion matrices, precision recall tradeoffs, and ROC-AUC curves, by training an end to end classification pipeline and documenting evaluation results for non technical stakeholders.
